The design and construction of facilities for handling cattle

December 6th, 2018 - The design and construction of facilities for handling cattle T Grandin Animal Science Department Colorado State University Fort Collins CO 80523 USA

December 5th, 2018 - Gluconeogenesis GNG is the metabolic pathway by which glucose is synthesized from non-carbohydrate precursors. The pathway is the reverse of glycolysis and occurs primarily in the liver and kidney. It involves the conversion of pyruvate to glucose through a series of enzymatic steps. Key enzymes include pyruvate carboxylase, phosphoenolpyruvate carboxykinase, and fructose-1,6-bisphosphatase. The pathway is essential for maintaining blood glucose levels during fasting and for providing energy to the brain and other tissues.
